

The clinic SeineVet is a referral practice located in Rouen (France). We are seeking a veterinarian to go on developing our dermatology activity: a board-certified or a board-eligible ECVD but also a resident that could be shared between the clinic/hospital of the resident supervisor and our clinic (we can consider paying the majority of the fees of the residency program if this situation is accepted by the resident, its supervisor, and the ECVD board).

The clinic is based in Boos, 15 minutes east of the city of Rouen and 1 hour of Paris by direct train or by car. Rouen is a living city of more than 110000 inhabitants and a large urban area of more than 500000 inhabitants. It is a city steeped in history where life is good.

The team will include 25 veterinarians and 23 nurses with rapid development. At this time, we have specialists in surgery and reproduction and we are seeking specialists in neurology, diagnosis imaging, internal medicine, and dermatology.

At this time, we have a referral activity in surgery, diagnostic imaging, internal medicine, reproduction, dermatology, endoscopy, oncology, and emergencies.

The technical platform offers 8 consultation rooms, 1 preparation room, 5 operating theaters (orthopedics, arthroscopy, C-arm fluoroscopy, neurosurgery, soft tissues surgery, celioscopy/thoracoscopy, rigid and soft endoscopy), 4 kennels (56 hospitalization places including the emergency unit in the preparation room, 1 standard kennel, 1 isolation kennel, 1 chemotherapy kennel, 1 cattery), 1 laboratory (hematology, biochemistry, hormonal tests, ionograms, coagulation tests, blood gas, microscope with digital camera...), 1 ultrasonography room (a second ultrasonography machine is available in the preparation room), 1 digital radiography room, 1 32-slice CT room...

We have scheduled the creation of a new referral clinic intending to become a veterinary hospital soon.

Referral practice in dermatology is sufficient to offer a full-time for a specialist. Our dermatologist is considering reducing his consultation time to develop new activities. So you may be able to pilot the majority of dermatology activity soon as your convenience. In 2020 there were about 300 primary referral consultations and 450 follow-ups, 100 skin tests, 40 video otoscopy, 80 cutaneous biopsies... Our dermatologist makes regularly clinical trials and meetings for laboratories.

Even with the rapid growth of the clinic, we make efforts to conserve our familial way of work and our quality of life. Our objective is to go to work with a smile every day and to work in a community with veterinarians and nurses.

I hope this proposal will catch your attention. Do not hesitate to ask me for more information.
